Disinfectant resistance according to Englisch Dekor's internal, practical test procedure

Test 1:

The disinfectants are diluted with tap water according to the manufacturer's instructions or used neat/pure. Over a period of one month, the test specimens are sprayed three times per day. Product residues are not removed by wiping during the test period to simulate a worst-case scenario. After the test period, a visual and haptic assessment of the test materials is made.

Annotations:

- The recommended dilution and exposure time of the products (manufacturer's specifications) should be adhered to. In practice, it is recommended to apply the surface disinfection solutions to the entire surface to be treated, so that uniform wetting is ensured over the exposure time.
- The composition of the disinfectants corresponds to the status of May 2017. Englisch Dekor cannot guarantee any changes to the formulation of the disinfectants by the manufacturers.

Conditionally suitable: please test these disinfectants on a hidden area before large-scale use.
Do not leave on for a long period of time and do not use permanently.

Example Final Result:

Agent	Dilution	Suitable		Conditionally suitable*	Not suitable
		Smooth/Quilted		Smooth/Quilted	Smooth/Quilted
Aldasan 2000	1%	X		X	
Antiseptica Kombi Liquid	undiluted/pure	X		X
